

KASHYAP MAHESHWARI

Louisville, KY | (412) 980-1292 | kashpm2002@gmail.com | kashcreates.app

SUMMARY

Full-stack software engineer who ships production systems end to end — web, iOS, and Android. Currently building and maintaining three live products: a multi-sided booking marketplace, a fantasy sports platform published to the App Store and Google Play, and an equity research terminal. Depth in real-time systems, PostgreSQL and row-level security, payments and KYC, data pipelines, and 3D graphics on the web.

EXPERIENCE

Software Engineer — Nightkey (Growthneuron LLC)

2024 – Present

Multi-sided nightlife booking marketplace — clients, promoters, venues, bottle servers / nightkey.io / [App Store](#) / [Google Play](#)

- Built and shipped four product surfaces on one schema: iPad-optimized venue dashboard (Next.js) plus guest and promoter apps for iOS and Android (Expo)
- Designed the PostgreSQL schema across 121 versioned migrations with row-level security on every table, serving four distinct user roles from a shared Supabase backend
- Implemented 33 Supabase Edge Functions covering merchant boarding, payouts, payment webhooks, identity verification, and notifications
- Integrated payment processing, Twilio SMS, Expo push notifications, and automated ID verification via AWS Rekognition and Google Cloud Vision

Software Engineer — Ballknowers (CFB Fantasy LLC)

Oct 2025 – Present

Season-long fantasy sports platform / ballknowers.app / [App Store](#) / [Google Play](#)

- Shipped a full fantasy platform across web, iOS, and Android: real-time snake and auction drafts, live scoring, waivers with FAAB bidding, trades, lineups, and playoffs
- Built the real-time draft system on WebSocket broadcast with presence tracking, backed by PostgreSQL stored procedures for atomic pick resolution under concurrency
- Published and maintained iOS and Android apps through App Store and Google Play review cycles, with an over-the-air update pipeline, Apple/Google sign-in, and universal-link invites
- Integrated Stripe billing with subscription tiers, webhook-driven entitlement grants, and feature gating; built 15+ scheduled jobs for live scoring, waiver processing, and data ETL
- Built a React Three Fiber 3D uniform editor backed by a custom Blender-to-web asset pipeline
- Instrumented the funnel end to end: PostHog events across web and mobile, install attribution, and an App Store Connect pipeline feeding an internal analytics dashboard

Software Engineer — Third Eye Capital

Jun 2025 – Present

Equity research terminal and pattern detection platform / thirdeyecapital.ai

- Built a FastAPI backend exposing 130+ REST endpoints, fed by an automated market-data pipeline with caching and a multi-source fallback chain
- Developed a backtesting engine with target-hit screening and statistical analysis (correlation, covariance matrices, quartile decomposition)
- Built a 9-tab research terminal in React with Recharts and lightweight-charts, TanStack Query for server state, and tiered access control

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	React, Next.js, Expo, Tailwind CSS, Three.js / React Three Fiber
Backend	Node.js, FastAPI, PostgreSQL, Supabase, REST API design, row-level security
Infrastructure	Vercel, Edge Functions, Redis, scheduled jobs, CI/CD, OTA mobile releases
Integrations	Stripe, Twilio, AWS Rekognition, Google Cloud Vision, Claude and Gemini APIs
Analytics	PostHog (web + mobile), AppsFlyer attribution, App Store Connect API, funnel instrumentation

EDUCATION

M.S. Human Physiology, University of Louisville, GPA 3.93 (2021–23) · **B.S. Biological Sciences**, University of Pittsburgh (2016–19)

Prior: Microbiologist, Allegheny County Health Dept. (2020–21) · Research Assistant, UPMC (2017–19)
